ADHESIVES - SEALANTS - CHEMICAL PRODUCTS FOR BUILDING

Mapesil AC

Application

Sealing flexible fillet, shrinkage and expansion joints in ceramic, sanitary ware, glass and painted surfaces. Ideal for internal and external ceramic floors and coatings, damp environments and swimming pools. May also be used for mineral substrates and absorbent materials treated with **Primer FD**.

Advantages

- ❑ Pure silicon with no solvents
- ❑ Low modulus of elasticity
- ❑ Available in 26 colours coordinated with the "Mapei Coloured Grouts" range and transparent (999*).
- ❑ **Mould-resistant with BioBlock® technology**
- ❑ High strength, high thermal and chemical resistance
- ❑ Excellent resistance to atmospheric agents

It is important to be aware that...

it is very easy to dilute acetic silicon sealants with cheap solvents or charge them with inert materials which are not technically required for the product: the only reason for adding solvents and mineral charges is to lower the cost of the product, but to the detriment of the product's performance.

Unlike all the other sealants offered by our competitors, **Mapesil AC** is a pure acetic silicon sealant with no solvents and a dry residual content of 98%: such high quality means high flexibility and bond strength over the years, no volumetric shrinkage and no yellowing or change in colour.

Therefore, unlike our competitors' products, **Mapesil AC** complies with numerous international standards, such as ISO 11600 F 25 LM, DIN 18540, BS 5889, ASTM C 920, TT S 00230C and TT S 001543A.

The quality of the formulate and vast range of colours available in stock make **Mapesil AC** the ideal sealant for high-quality applications which require a long service life.
