WHERE TO USE
Non-structural repairs and smoothing layers on internal and external, horizontal and vertical concrete surfaces, suitable for repairing structures exposed to the open air and in permanent contact with water.

Some typical application examples
- Quick repairs to deteriorated parts in concrete, the corners of beams, pillars, buffer walls, cornices and the front edges of balconies.
- Quickly smoothing over surface defects in cast concrete, such as honeycombs, spacer holes, construction joints, etc., before painting the surface.
- Repairing and smoothing over concrete mouldings on civil buildings, such as skirt roofs and protruding decorative elements.
- Repairing pre-cast concrete structures.

TECHNICAL CHARACTERISTICS
**Planitop Smooth & Repair** is a one-component, thixotropic mortar with very low emission of volatile organic compounds (EMICODE EC1 R Plus) made from special hydraulic binders, fine selected aggregates, synthetic polycrylonitrile fibres, synthetic polymers and special admixtures, according to a formula developed in the MAPEI Research & Development Laboratories.

After mixing, the product forms mortar with good workability and with setting and hardening times that can be modulated by adding Mapetard ES. It is applied by trowel in a single layer from 3 to 40 mm thick to repair and smooth over concrete.

Planitop Smooth & Repair hardens without shrinking and is characterised by its excellent adhesion to concrete substrates. After hardening, Planitop Smooth & Repair has the following characteristics:
- excellent bond strength to both old concrete (≥ 1.5 MPa) if wetted beforehand with water, and steel reinforcement, especially when treated with Mapefer or Mapefer 1K anti-corrosion and re-alkalising cementitious mortars, certified EN 1504-7 “Corrosion protection of reinforcement”;
- high dimensional stability and, therefore, low risk of cracking during the plastic phase and when hardened;
- thermal compatibility to freeze/thaw cycles, measured as adhesion according to EN 1542;
- low permeability to water.

Planitop Smooth & Repair meets the requirements of EN 1504-9 (“Products and systems for protecting and repairing concrete structures: definitions, requirements, quality control and conformity assessment. General principles for the use of products and systems”) and the minimum requirements of EN 1504-3 (“Structural and non-structural repairs”) for non-structural R2-class mortars and the requirements of EN 1504-2 coating (C) according to principles MC and IR (“Concrete surface protection systems”).

RECOMMENDATIONS
- Do not apply Planitop Smooth & Repair on smooth substrates: roughen surfaces beforehand.
- Do not apply Planitop Smooth & Repair on dry substrates.
- Do not add cement or admixtures, except Mapetard ES.
• Do not add water to the mix to make it more workable once it starts to set.
• Do not leave bags of Planitop Smooth & Repair exposed to the sun before use.
• Do not use Planitop Smooth & Repair if the temperature is lower than +5°C.
• Do not use Planitop Smooth & Repair if the bag is damaged or if it has been opened previously.
• Do not use Planitop Smooth & Repair for fixing elements accurately in place (use Mapefill or Mapefill R).

APPLICATION PROCEDURE

Preparation of the substrate
• Remove all deteriorated and loose concrete to form a solid, rough and strong substrate. Any areas previously repaired and which are not perfectly bonded must also be removed.
• Remove all dust, rust, cement laitance, grease, oil and paint from the concrete and reinforcement rods by sandblasting or hydro-sandblasting.
• Treat reinforcement rods with Mapefor or Mapefor 1K, according to the procedure illustrated in the relative Technical Data Sheet for each product.
• Wait until Mapefor or Mapefor 1K has dried.
• Saturate the substrate with water.
• Before carrying out repairs with Planitop Smooth & Repair, wait until excess water has evaporated off. If necessary, use compressed air to help remove excess water. The substrate must be saturated with water but with a dry surface.

Preparation of the mortar
Pour approximately 4.2 litres of clean water into a container and slowly add a 25 kg bag of Planitop Smooth & Repair while mixing. Carefully mix the blend for several minutes then remove any powder which has stuck to the sides and bottom of the container. Add more water to obtain the consistency required without exceeding the recommended amount (approximately 4.3-4.8 litres). Mix again for several minutes to form a well-blended, plastic consistency, lump-free mix.
To make it easier to form a smooth, even paste, use an immersion mixer or a low-speed drill with a spiral mixing attachment to avoid dragging air into the mix. Mixing by hand is not recommended, more than the recommended amount of water would be required. If manual mixing is unavoidable, use a trowel and press the mortar against the sides of the container to break down all the lumps.
Planitop Smooth & Repair remains workable for around 15 minutes at +10°C to +25°C. If the workability time of Planitop Smooth & Repair needs to be increased due to specific site requirements or if the weather is particularly hot, the set-retarding admixture Mapetard ES for rapid-setting cementitious mortar may be added to the product.
This special additive, which may be added at a rate of up to one 0.25 kg canister every 25 kg bag of Planitop Smooth & Repair, allows the already excellent workability time of the mortar to be extended by a further 15-20 minutes. Thanks to its slight plasticising effect, adding Mapetard ES to Planitop Smooth & Repair allows the amount of mixing water to be reduced by 0.2-0.3 litres. In this case, pour approximately 4 litres of clean water and a canister of Mapetard ES into a container and slowly add a 25 kg bag of Planitop Smooth & Repair while mixing. Carefully mix the blend for several minutes then remove any powder which has stuck to the sides and bottom of the container. Add more water to obtain the consistency required without exceeding the recommended maximum amount of approximately 4.5 litres.

Application of the mortar
Apply a layer of mortar from 3 to 40 m thick with a trowel or putty knife; no formwork is required.
As soon as the mortar starts to set, tamp the surface with a sponge float. The waiting time required before carrying out this operation depends on surrounding weather conditions.
To paint and protect the surface, apply a coat of an elastomeric product from the Elastocolor line or an acrylic product from the Colorite line. The finishes available may be chosen from product’s relative colour chart or from a much wider range of shades available using the ColorMap® automatic colouring system. If the structures to be repaired are subject to high dynamic stress, it may be advantageous to apply a 2 mm thick layer of flexible smoothing and levelling compound such as Mapelastic, Mapelastic Guard or Mapelastic Smart before applying the coloured finish. In such cases, Elastocolor Paint must be used for the coloured finishing coat.

PRECAUTIONS TO BE TAKEN DURING AND AFTER APPLICATION
• Only use bags of Planitop Smooth & Repair which have been stored on their original, covered pallets.
• In hot weather, store the product in a cool area and use cold water to prepare the mix.
• In cold weather, store the product in a closed area at a temperature of +20°C and protect from frost. Use tepid water to prepare the mortar.
• After applying and tamping the mortar, particularly in hot or windy weather, we recommend curing Planitop Smooth & Repair carefully to avoid the mixing water evaporating too quickly, otherwise surface cracks may appear due to plastic shrinkage. Spray water on the surface for at least 24 hours after applying the mortar or use a curing agent from the Mapecure range. If a curing agent is applied, make sure that it is removed from the surface by sand-blasting or hydro-blasting before applying any other product, since the curing agent may impede a good bond of successive coating layers.

Cleaning
Mortar which has not yet hardened may be washed from tools using water. Once
Planitop Smooth & Repair: thixotropic, fibre-reinforced, rapid-setting, shrinkage-compensated cementitious mortar for repairing and smoothing concrete conforming to the requirements of EN 1504-3 class R2 and EN 1504-2 coating (C), principles MC and IR

(*) If Planitop Smooth & Repair is admixed with Mapetard ES (one 0.25 kg canister per 25 kg bag) the mixing water must be reduced by 0.2-0.3 l.

(**) Adding Mapetard ES extends the workability time of Planitop Smooth & Repair by a further 15-20 minutes.

N.B. The performance characteristics of Planitop Smooth & Repair admixed with Mapetard ES are the same as the product without admixture.
hardened, cleaning is much more difficult, and it must be removed mechanically.

**CONSUMPTION**
Approximately 15 kg/m² per cm of thickness.

**PACKAGING**
25 kg bags and boxes containing 4 x 5 kg packets.

**STORAGE**
Planitop Smooth & Repair may be stored for up to 12 months in its original packaging. The product complies with the conditions of Annex XVII to Regulation (EC) N° 1907/2006 (REACH), item 47. The product is available in special 25 kg vacuum-packed polyethylene bags which may be stored outside for the entire construction phase of the site. Rain has no effect on its characteristics.

**SAFETY INSTRUCTIONS FOR PREPARATION AND APPLICATION**
Planitop Smooth & Repair contains cement that when in contact with sweat or other body fluids causes irritant alkaline reaction and allergic reactions to those predisposed. It can cause damage to eyes. In case of contact with eyes or skin wash immediately with plenty of water and seek medical attention. It is recommended to use protective gloves and goggles and to take the usual precautions for handling chemical products. For further and complete information about the safe use of our product please refer to the latest version of our Material Safety Data Sheet.

**PRODUCT FOR PROFESSIONAL USE.**

**WARNING**
Although the technical details and recommendations contained in this product data sheet correspond to the best of our knowledge and experience, all the above information must, in every case, be taken as merely indicative and subject to confirmation after long-term practical application; for this reason, anyone who intends to use the product must ensure beforehand that it is suitable for the envisaged application. In every case, the user alone is fully responsible for any consequences deriving from the use of the product.

Please refer to the current version of the Technical Data Sheet, available from our website www.mapei.com

This symbol is used to identify Mapei products which give off a low level of volatile organic compounds (VOC) as certified by GEV (Gemeinschaft Emissionskontrollierte Verlegewerkstoffe, Klebstoffe und Bauprodukte e.V.), an international organisation for controlling the level of emissions from products used for floors.

Our Commitment To The Environment
MAPEI products assist Project Designers and Contractors create innovative LEED (The Leadership in Energy and Environmental Design) certified projects, in compliance with the U.S. Green Building Council.
