WHERE TO USE
For precision anchoring of machinery and metallic structures.

Some application examples
• Anchoring machine tools by casting below the machine base.
• Anchorage structural steel work.
• Filling rigid joints between elements in concrete and precast concrete structures.
• Installations below wall level, etc.

TECHNICAL CHARACTERISTICS
Mapefill is a pre-blended powdered grout composed of high strength cement, graded aggregates and special admixtures with an expansive agent formulated by the MAPEI research laboratories.

Mapefill when mixed with water is transformed into a fluid grout without segregation that is able to fill intricate spaces.

Mapefill, due to its expansive agent, is characterized by a total absence of shrinkage in its plastic phase (ASTM norm 827) and its hardened phase (UNI norm 8147) and develops very high early flexural and compressive strength.

Mapefill also has the following qualities:
• excellent impermeability to water;
• excellent adhesion to iron and concrete;
• excellent resistance to dynamic/mechanical stress;
• modulus of elasticity and thermal expansion coefficient similar to those of high quality concrete;
• Mapefill does not contain metal aggregates or aluminium dust.

Mapefill meets all the main requirements for EN 1504-9 (“Products and systems for the protection and repair of concrete structures; definitions, requirements, quality control and conformity assessment. General principles for the use of products and systems”) and the minimum requirements for EN 1504-6 (“Anchoring steel reinforcement”).

RECOMMENDATIONS
• Do not use Mapefill for structural repair by pouring in forms (use Mapegrout Hi-Flow).
• Do not use Mapefill for vertical applications by spray or trowel (use Mapegrout Thixotropic).
• Do not add cement or admixtures to Mapefill.
• Do not add water when the mix has started to set.
• Do not use Mapefill if the bag is damaged or has already been opened.
• Do not apply Mapefill at temperatures below +5°C.

APPLICATION PROCEDURE
Preparing the substrate
• Remove all deteriorated concrete down to sound substrate.

</table>
• Scarify the surface and completely eliminate dust, oils, grease, debris and laitance.

• Soak the sides of the cavity to be filled with water. Before pouring, wait for the excess water to evaporate. To facilitate the elimination of unabsorbed water, use compressed air or a sponge if necessary.

Preparing the grout
Pour into a concrete mixer 3.50-3.75 litres of water. Start concrete mixer and slowly add Mapefill continuously. Mix for 1-2 minutes, remove from the sides of the concrete mixer any powder that is not well blended; remix for another 2-3 minutes until a fluid homogeneous paste is obtained. According to the quantities to be prepared, a grout mixer or a mechanical mixer can be used paying careful attention to avoid the formation of air bubbles. Mixing by hand is not recommended.

Application
Pour Mapefill from one side only in a continual flow encouraging the discharge of air bubbles into the appropriate area which should not be less than twice the diameter of the bar to be anchored. The use of Mapefill for connecting precast concrete elements and the filling of rigid joints is recommended for thicknesses up to 60 mm. It is not necessary to vibrate the grout mechanically; to facilitate the filling of spaces that are particularly difficult, use a wood list or an iron rod.

Addition of fine gravel
For filling cavities that have dimensions greater than those indicated, add Gravel 6-10 not exceeding 30% by weight of Mapefill. Because certain characteristics may vary, such as workability and strength, it is advisable to carry out preliminary tests at the work site or to consult our Technical Services Department.

INSTRUCTIONS TO BE OBSERVED BEFORE AND AFTER APPLICATION
• At temperatures around +20°C, no particular precautions are required.

• In hot weather it is advisable not to expose the material to sun and to use cold water in preparing the mix.

• In low temperatures it is advisable to use cold water that is at +20°C.

• After casting, Mapefill must be properly cured; the surface of grout exposed to the air must be protected from rapid water evaporation that can cause the formation of surface cracks due to plastic shrinkage especially in hot and/or windy weather.

• Spray water on the surface exposed to air the first 24 hours of curing or apply an anti-evaporant.

Cleaning
Fresh grout can be removed from tools with water. After curing, cleaning becomes very difficult and can only be done mechanically.

CONSUMPTION
1.95 kg/dm³ of cavity to be filled.

PACKAGING
25 kg bags.

STORAGE
Mapefill may be stored for up to 12 months in its original packaging. The product complies with the conditions of Annex XVII to Regulation (EC) N° 1907/2006 (REACH), item 47. The product is available in special 25 kg vacuum-packed polyethylene bags which may be stored outside for the entire construction phase of the site. Rain has no effect on its characteristics.

SAFETY INSTRUCTIONS FOR PREPARATION AND APPLICATION
Mapefill contains cement that when in contact with sweat or other body fluids causes irritant alkaline reaction and allergic reactions to those predisposed. It can cause damage to eyes. In case of contact with eyes or skin wash immediately with plenty of water and seek medical attention. It is recommended to use protective gloves and goggles and to take the usual precautions for handling chemical products. For further and complete information about the safe use of our product please refer to the latest version of our Material Safety Data Sheet.

PRODUCT FOR PROFESSIONAL USE.

WARNING
Although the technical details and recommendations contained in this product data sheet correspond to the best of our knowledge and experience, all the above information must, in every case, be taken as merely indicative and subject to confirmation after long-term practical application; for this reason, anyone who intends to use the product must ensure beforehand that it is suitable for the envisaged application. In every case, the user alone is fully responsible for any consequences deriving from the use of the product.

Please refer to the current version of the Technical Data Sheet, available from our website www.mapei.com.
