WHERE TO USE
Colourless protective coat for cementitious renders, cellular cement, facing bricks, natural and artificial stone against the eroding action of driving rain.

Some application examples
Restoration treatment for damp rendered walls exposed to the eroding action of rainwater.

Colourless, water-repellent protective layer for historical buildings of architectural interest.

Water-repellent treatment for walls, facing bricks and natural stone.

TECHNICAL CHARACTERISTICS
Antipluviol W is a milky, silane and siloxane-based dispersing agent in watery emulsion, characterised by its high capacity to penetrate all absorbent mineral materials used in the building industry to make them water repellent.

When applied on a porous substrate, Antipluviol W penetrates deep down and reacts with the natural humidity present in the said substrate to form a hydrophobic, water-repellent layer inside the pores and capillaries.

Thanks to this property, Antipluviol W forms an efficient barrier against aggressive agents present in the atmosphere, which are carried into the material by rainwater. The water-repellent treatment formed by Antipluviol W also improves the self-cleaning effect of the façade and reduces the capacity of moss and mildew from adhering to the material.

Antipluviol W does not form a film on the surface. Therefore, the material’s permeability to water vapour is not modified and the appearance of the surface remains practically unaltered.

Antipluviol W has excellent resistance to alkalinity and UV rays and maintains its water-repellent properties over a long period of time.

RECOMMENDATIONS
Antipluviol W is not suitable for impregnating the following:

- horizontal surfaces (e.g. terraces);
- basements;
- water tanks;
- walls subject to rising damp which carries salts;
- lift shafts and other areas subject to water under pressure;
- gypsum surfaces;

* The figures in brackets refer to the same substrate not treated with **Antipluviol W**

The product is considered as class III according to EN 1062-3 standards with a value of $W_{24} < 0.1$, which corresponds with low water absorption

- synthetic render or render decorated with synthetic paint.

Carry out a preliminary test to ensure no colour changes take place on the substrate when **Antipluviol W** is to be used on natural stones, coloured renders or on other types of substrates which show no uniform absorbency.

**APPLICATION PROCEDURE**

**Preparation of the substrate**

Before impregnating the surface, it is essential that all dirt, dust, grease, oil, paint, saline efflorescence, moss and weeds are eliminated to avoid hindering deep penetration of **Antipluviol W**.

The choice of which cleaning system to use on old surfaces depends on the type of dirt to be removed, but hosing down with cold water is usually sufficient.

Cleaning with hot water or steam is particularly suitable if oil or grease are present on the material to be treated.

If the surface is not dirty, brush the surface with a stiff brush and remove remaining material with compressed air.

**Antipluviol W** must only be applied on dry surfaces. If water is present, it is unable to penetrate deep down into the material.

**Preparation of the product**

**Antipluviol W** is ready-to-use and must not be diluted with water.

Shake well before use.

**Application**

In order to apply **Antipluviol W** evenly, we recommend using a back-pack spray gun for large surfaces, or a roller or brush.

Apply a number of coats until the surface is completely saturated; apply each successive coat while the previous one is still wet.

On substrates with poor absorbency, be careful not to form layers of the product during application. Go over the surface with a sponge float if necessary while the product is still wet.
The efficiency and lifetime of the hydrorepellent effect depends on the penetration depth of the impregnator.

This parameter is directly proportional to the absorbency capacity of the material to be treated and the amount of impregnator applied.

After applying Antipluvio W, water-based products may not be used to paint over the surface.

**PACKAGING**

Antipluvio W is supplied in 2 and 10 kg plastic drums.

**STORAGE**

24 months if stored in a dry place away from sources of heat and at a temperature between +5°C and +30°C. Protect from frost.

**SAFETY INSTRUCTIONS FOR PREPARATION AND APPLICATION**

Antipluvio W is not considered dangerous according to current norms and regulations regarding the classification of mixtures. However, the use of protective gloves and goggles and the application of the usual precautions taken when handling chemical products are recommended.

If the product is applied in a closed area, make sure that it is well ventilated.

For further and complete information about the safe use of our product please refer to the latest version of our Material Safety Data Sheet.

**PRODUCT FOR PROFESSIONAL USE.**

**WARNING**

Although the technical details and recommendations contained in this product data sheet correspond to the best of our knowledge and experience, all the above information must, in every case, be taken as merely indicative and subject to confirmation after long-term practical application; for this reason, anyone who intends to use the product must ensure beforehand that it is suitable for the envisaged application. In every case, the user alone is fully responsible for any consequences deriving from the use of the product.

Please refer to the current version of the Technical Data Sheet, available from our website [www.mapei.com](http://www.mapei.com)

**CONSUMPTION**

The consumption rate is heavily influenced by the absorbency of the substrate, and varies approximately from 0.20-1 kg/m².

Listed below is a number of materials with their typical consumption rates:

- facing bricks: 0.50-0.75 kg/m²
- conventional render: 0.50-0.80 kg/m²
- tuff stone: 0.50-1.00 kg/m²
- cementitious smoothing layers: 0.20-0.40 kg/m²
- marble: 0.20-0.50 kg/m²

**Cleaning**

Tools used for applying the product may be cleaned with water.

**VOLATILE ORGANIC COMPOUND (VOC) LEVEL**

Type of Regulated Architectural Paints under the Air Pollution Control (Volatile Organic Compounds) Regulation of Hong Kong:

[Primers, sealers & undercoaters]

VOC content (ready to use) = 61 g/litre
