**DESCRIPTION**

Planitop 330 Fast is a quick-setting, polymer-modified, fiber-reinforced cementitious rendering, patching and leveling mortar for interior and exterior walls, floors and submerged areas. It can be applied from 1/8” to 1-1/4” (3 mm to 3.2 cm) in thickness to ramp, smooth or level surfaces. Eliminating the need for a latex additive, Planitop 330 Fast requires only mixing with water to produce a nonsagging mortar that is ready for tile installation in as little as 90 minutes.

**FEATURES AND BENEFITS**

- For interior and exterior walls and floors
- Can be applied at 1/8” to 1-1/4” (3 mm to 3.2 cm) in thickness in a single coat
- Mix with water only.
- Smooth, creamy consistency with easy troweling application
- For smoothing and rendering irregular interior and exterior substrates such as cement backer units (CBUs)
- Fast drying allows tile installation in 90 minutes.
- Pot life of 20 to 30 minutes
- Non-sagging/non-slumping properties
- Non-shrinking formulation
- Approved for freeze/thaw environments
- Ideal for submerged applications such as pools and fountains

**INDUSTRY STANDARDS AND APPROVALS**

**LEED v4 Points Contribution**

Health Product Declaration (HPD)* ........................................Up to 2 points

* Using this product may help contribute to LEED certification of projects in the category shown above. Points are awarded based on contributions of all project materials.

**Additional Green Certifications**

- Living Building Challenge (LBC) Red List Free: This product has been verified per the most current Red List on the LBC’s Website.

**WHERE TO USE**

- Leveling, rendering or patching interior or exterior concrete, wall and floor surfaces from 1/8” to 1-1/4” (3 mm to 3.2 cm)
- Ramping, smoothing and leveling clean, interior and exterior concrete and screed floor substrates to prepare them for installing ceramic, stone or waterproofing systems
- For use in residential and commercial applications in dry and wet areas, including exterior facades
- Repairing or forming slopes on terraces and balconies
- Rendering ceilings, curbs and shower seats as well as stair treads, risers and stringers
- Preparing pools and fountains to receive tile
LIMITATIONS
• Install at between 45°F and 95°F (7°C and 35°C).
• Do not use on deformable substrates.
• After applying Planitop 330 Fast, protect the surface from water exposure for at least 4 hours at 70°F (21°C), for 24 hours at 45°F (7°C) and in all cases until it has hardened.
• Do not mix Planitop 330 Fast with other products and never add water to the mix once it has started to set.

SUITABLE SUBSTRATES
• Concrete (cured for at least 28 days)
• Masonry cement block, brick and cement mortar beds
• Cement backer units (CBUs). See the manufacturer’s installation guidelines.
• Gypsum wallboard and plaster (primed) – interior walls in dry areas only. For priming instructions, see the technical bulletin “Gypsum-Based Floors and Walls: Which MAPEI Products Can Be Applied?” in the Related Documents section of the Tile & Stone Installation Systems page on MAPEI’s Website.
• Shotcrete and pool plaster

SURFACE PREPARATION
• All substrates must be structurally sound, stable, dry, clean and free of any substance or condition that may reduce or prevent proper adhesion.
• For direct-bond applications, the concrete surface must be clean and porous with a minimum concrete surface profile (CSP) of #2.
• Surfaces exposed to direct sunlight or wind must be dampened with a wet sponge before applying Planitop 330 Fast.
• Concrete substrates should be saturated surface-dry (SSD).
• See the “Surface Preparation Requirements” reference guide in the Related Documents section of the Tile & Stone Installation Systems page on MAPEI’s Website.

MIXING
Before product use, take appropriate safety precautions. Refer to the Safety Data Sheet for details.
1. Into a clean mixing container, pour about 4 to 5 U.S. qts. (3.79 to 4.73 L) of cool, clean water.
2. Gradually add 50 lbs. (22.7 kg) of Planitop 330 Fast powder while slowly mixing. Mix to the desired consistency.
3. Use a low-speed mixing drill (at about 300 rpm), with an angled cross-blade mixer or auger mixer.

PRODUCT APPLICATION
Read all installation instructions thoroughly before installation.
1. Apply a thin skimcoat/bonding layer of Planitop 330 Fast keyed into the substrate with a flat trowel.
2. Immediately apply a build layer of Planitop 330 Fast into the fresh skimcoat at the thickness required to level and even the substrate in a single layer, up to a maximum of 1-1/4” (3.2 cm).
3. If thick layers are required, Planitop 330 Fast may be keyed into the substrate with a flat trowel and leveled off with a metal screed bar, wood float or steel flat trowel.
4. Waterproofing membranes may be applied after about 24 hours at 70°F (21°C). Ceramic tiles, stone and all types of mosaic may be set after about 3 to 4 hours at 70°F (21°C) and after 24 hours at 45°F (5°C).

EXPANSION AND CONTROL JOINTS
• Provide for expansion and control joints as specified per TCNA Method EJ171, or TTMAC Specification Guide 09 30 00, Detail 301 MJ.
• Do not cover expansion joints with mortar.

CLEANUP
Clean tools promptly while the mortar is fresh using only water.

PROTECTION
• Provide for dry, heated storage on site and deliver materials at least 24 hours before work begins.
• Protect from rain, snow, freezing and direct sunlight, which may affect curing and performance properties.
• Maintain a temperature between 45°F and 95°F (7°C and 35°C) for at least 4 hours after the installation.
• Note that cool, damp and humid conditions will slow the rate of hydration and will cause Planitop 330 Fast to retain a higher moisture content for a longer period of time.
• Protect the installation from foot traffic for 2 to 3 hours.
• Protect the installation from water immersion for 7 days.
Product Performance Properties at 73°F (23°C) and 50% relative humidity
