DESCRIPTION

_Ultraplan Easy_ is a quick-setting, self-leveling underlayment that requires only a clean, soundly bonded, properly prepared and primed substrate before application.

FEATURES AND BENEFITS

- No surface profiling required
- Ready for tile in 3 hours
- Ready for resilient flooring in 16 to 24 hours

INDUSTRY STANDARDS AND APPROVALS

- Meets compression and flatness requirements of ASTM F710-17, Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring
- Meets compression and flatness requirements of ASTM F2873-13, Standard Practice for the Installation of Self-Leveling Underlayment and the Preparation of Surface to Receive Resilient Flooring

Green certifications
- CRI Green Label Plus #GLP01646. Refer to the CRI’s Website at www.carpet-rug.org for additional information.
- Living Building Challenge (LBC) Red List Free: This product has been verified per the most current Red List on the LBC’s Website.

WHERE TO USE

- For leveling, smoothing and repairing of interior residential or commercial floors before the installation of flooring systems or floor coverings
- For use over radiant-heated floors or to encapsulate hydronic or electric radiant-heated floors
- Interior, residential applications (such as rental apartments, condominiums and homes)
- Interior, commercial applications (such as office buildings, hotel rooms/hallways, restaurants and cafeterias)
- Interior, heavy-commercial applications (such as hotel lobbies, convention centers, airports, shopping malls, grocery stores and department stores)
- Interior, institutional applications (such as hospitals, schools, universities, libraries and government buildings)

LIMITATIONS

- Do not mix with other self-leveling underlayments.
- Do not install over flooring products, over adhesives or over substrates containing asbestos.
- For interior use only
- Do not use as a final wear surface. _Ultraplan Easy_ must be covered with a finished flooring system or floor covering.
- Install _Ultraplan Easy_ in temperatures between 50°F and 85°F (10°C and 29°C).
- Do not install over moving control joints (with active cracks) or over expansion joints.
- If the substrate has a moisture vapor emission rate (MVER) exceeding 5 lbs. per 1,000 sq. ft. (2.27 kg per 92.9 m²) per 24 hours using a calcium chloride test (reference ASTM F1869), and a relative humidity (RH) reading greater than 80% (ASTM F2170), use a MAPEI epoxy moisture barrier. Consult...
Mapei’s Technical Services Department for product recommendations.

- Do not install Ultraplan Easy over sheet vinyl or self-stick vinyl tile; luxury vinyl tile or luxury vinyl plank (LVT or LVP), glue-down wood flooring; particleboard; chipboard; hardboard (Masonite); Lauan panels; crack-isolation or sound-control membranes; gypsum-based patching materials; or any other nondimensionally stable materials.
- Do not install if the maximum allowable deflection of the supporting surface exceeds L/360 (or L/720 for installations involving natural stone or their agglomerates) when exposed to live or dead loads.
- Do not use in areas subjected to prolonged exposure to moisture. Contact Mapei’s Technical Services Department for waterproofing recommendations.
- Do not mix with any other self-leveling underlayment.

**SUITABLE SUBSTRATES**

- Sound, dimensionally stable, fully cured concrete at least 28 days old and free from hydrostatic pressure
- Well-bonded and dimensionally stable ceramic tile, porcelain tile, quarry tile, natural stone, vinyl composition tile (VCT), cement, epoxy-based moisture barriers and epoxy terrazzo
- Properly installed cement backer units
- Durable, sound, stable and fully cured cement-based mortar beds
- Engineer-approved plywood or oriented strand board (OSB) subfloors in accordance with the most recent edition of the Tile Council of North America’s F185 specification. Before a Mapei underlayment is applied over plywood flooring, ASTM C847 specifications for finished flooring, load, use and/or deflection may require a synthetic lath such as Mapelath® or an appropriate diamond mesh on top of the primed surface.
- Existing nailed-down wood flooring (including plank wood subfloors, strip wood subfloors or nailed-down solid wood flooring) that has been covered over with at least one layer of 5/8” (16 mm) plywood, glued and screwed
- Gypsum-based underlayments

Consult Mapei’s Technical Services Department for installation recommendations regarding substrates and conditions not listed.

**SURFACE PREPARATION**

- All substrates must be properly prepared, primed, structurally sound, stable, solid and dry.
- On concrete substrates, fill in deep areas, holes and cracks with an appropriate Mapei patching compound or screed. Fluid self-leveler may leak through to a floor below or other unwanted cavities.
- On plywood substrates, fill joints with an acrylic-based caulkng compound to prevent underlayment from leaking onto a floor below.

Refer to Mapei’s reference guide “Surface-Preparation Requirements for Self-Leveling Underlayment” for details on proper surface preparation.

**MIXING**

Before product use, take appropriate safety precautions. Refer to the Safety Data Sheet for details.

**General mixing**

1. Mix water and Ultraplan Easy powder at a mixing ratio of 5.75 to 6 U.S. qts. (5.44 to 5.68 L) of cool, clean, potable water per 50 lbs. (22.7 kg) of powder.

2. Measure and pour the required amount of water for the number of bags to be mixed into a clean mixing vessel (mixing barrel or plastic pail measuring 5 U.S. gals. or 18.9 L). For best results, the water temperature should be at about room temperature (70°F or 21°C). The mixing ratio must remain consistent; do not overwater the mixture.

3. Slowly add Ultraplan Easy powder into the pre-measured water. Use a high-speed drill and an oval paddle mixer to mix Ultraplan Easy to a homogenous, lump-free consistency. Continue to mix for 2 to 3 minutes. Do not overmix. Overmixing or moving the mixer up and down during the mixing process could trap air or cause pinholing during the application and curing process.

**Pump mixing**

1. The mixer and pump must be designed for cement materials and in good working condition. Periodic cleaning of pumping equipment is required per the manufacturer’s instructions. Be sure to pressure-test the rotor and stator before mixing. Use a mesh screen “sock” at the end of the hose to catch any foreign material that may have fallen into the hopper during mixing.

2. Ultraplan Easy can be mechanically mixed to a ratio of 5.75 to 6 U.S. qts. (5.44 to 5.68 L) of cool, clean, potable water per 50 lbs. (22.7 kg) of powder. For best results, the water temperature should be at about room temperature (70°F or 21°C). Use a continuous mixer and pump (and at least 140 ft. or 42.7 m of hose), or a batch mixer and pump (and at least 110 ft. or 33.5 m of hose).

3. To ensure a suitable mix and flow, test the mixed material from the pump hose’s end in a small test area before general application.

Note: Cool-weather conditions may require a longer mixing time or additional hose length to ensure the best product performance.

**PRODUCT APPLICATION**

Read all installation instructions thoroughly before installation.

1. Concrete substrates and ambient room temperatures should be maintained between 50°F and 85°F (10°C and 29°C) during application as well as for 3 days before and after application.

</table>
2. Before product installation, close doors and windows, and turn off HVAC systems to prevent drafts during application and until the underlayment is cured. Protect areas from direct sunlight.

3. Quickly pour or pump Ultraplan Easy onto the properly prepared and primed surface in a ribbon pattern. Set the width of the pour at a distance that is ideal for maintaining a wet edge throughout placement. If a wet edge cannot be maintained, reduce the width of the pour. For best results, work as a team to provide a continuous flow of wet material, to avoid trapping air or creating a cold joint. Apply enough material to adequately cover all high spots.

4. Shortly after placing Ultraplan Easy, use a gauge rake to spread the material and assist in gauging it to the desired depth. After achieving the desired depth, use a smoother to obtain an even surface.

**CURING**
- Ultraplan Easy is self-curing; do not use a damp-curing method, or curing and sealing compounds.
- Cool-weather conditions may extend curing or setting times. Warmer weather conditions may accelerate working, curing and setting times.

**CLEANUP**
- Wash hands and tools with water promptly before the material hardens. Cured material must be mechanically removed.

**PROTECTION**
- Protect Ultraplan Easy from direct sunlight, excessive heat and drafty conditions during curing. Turn off all forced ventilation and radiant heating systems, and protect the installation for up to 24 hours after completion.
- Avoid walking on the installed surface for at least 2 to 3 hours after installation, depending upon temperature and humidity conditions.
- Protect the installation from traffic, dirt and dust from other trades until Ultraplan Easy is completely cured and final flooring has been installed.
- Do not expose Ultraplan Easy to rolling dynamic loads, such as fork lifts or scissor lifts, for at least 3 days after installation.
