**DESCRIPTION**

Granirapid is the next generation of high-performance, flexible mortar systems. As the industry’s first and only fast-curing system geared for fast-track projects, it develops high, early mechanical strength and can be specified for the same demanding applications as Keraclastic™. However, Granirapid will cure considerably faster because of its superior drying-out characteristics, which produce low residual moisture behind the tile after 24 hours, and does not contribute to efflorescence. When installed in conjunction with Ultracolor® Plus FA grout, Granirapid will allow water submersion in a revolutionary 72 hours.

**FEATURES AND BENEFITS**

- High-performance bond
- Best for most difficult tiles, substrates and conditions
- Allows grouting in 3 to 4 hours
- Excellent for large tile and ungauged tile

**INDUSTRY STANDARDS AND APPROVALS**

- ISO 13007: Classification C2FS2P2
- ANSI: Meets or exceeds ANSI A118.4F, ANSI A118.11 and ANSI A118.15F bond-strength requirements

**WHERE TO USE**

- Most interior/exterior residential and commercial installations on floors, walls and ceilings
- Installation of ceramic and porcelain tile, glass tile, quarry tile, pavers, Saltillo tile, and most types of marble, granite and natural stone and dimensionally stable agglomerated stones

**LIMITATIONS**

- Install only at temperatures between 40°F and 95°F (4°C and 35°C).
- Do not use for moisture-sensitive stone (green marble; some limestone and granite, or agglomerates made from these moisture-sensitive stones), cultured marble or resin-backed tiles. Instead, use suitable epoxy or urethane adhesives. (See the respective Technical Data Sheets for more information.)
- Some glass tile backings may not be suitable for use with Granirapid. Consult the recommendations of the TCNA and the glass tile manufacturer.
- For light-colored stones and translucent natural stone, a white mortar is recommended. Do not use over dimensionally unstable substrates such as hardwood flooring, oriented strand board (OSB), substrates containing asbestos, or metal. See the “Suitable Substrates” section.
- To use directly over gypsum-based patching or leveling substrates, apply a suitable sealer/primer before use. See MAPEI’s Technical Bulletin “Gypsum-Based Floors and Walls: Which MAPEI Products Can Be Applied?” in the Related Documents section of the Tile & Stone Installation Systems page on MAPEI’s Website.
- Consult building code requirements for use on exterior commercial facades.
- Installations of tile over nonporous surfaces, such as waterproofing membranes and existing tile, may require extended setting/curing times.
• Large-and-heavy-tile mortars (formerly known as medium-bed mortars) are not designed to correct uneven floors. Substrates must be flat and level before the installation of large-format tile.

**SUITABLE SUBSTRATES**

• Concrete (cured at least 28 days)
• Masonry cement block, brick, cement mortar beds and leveling coats
• Cement backer units (CBUs) – see manufacturer’s installation guidelines
• Gypsum wallboard and plaster – interior walls in dry areas only (priming may be required). See MAPEI’s Reference Guide “Surface Preparation Requirements” in the Related Documents section of the Tile & Stone Installation Systems page on MAPEI’s Website.
• APA Group 1 and CANPLY 0121 exterior-grade plywood (interior, residential and light commercial floor and countertops in dry conditions only)
• Properly prepared vinyl composition tile (VCT), plastic laminate countertops, non-cushioned sheet vinyl and cutback residue (interior only)
• Properly prepared existing ceramic and porcelain tile, porcelain mosaics, cement terrazzo, quarry tile and pavers (interior in dry conditions only)
• MAPEI waterproofing, crack-isolation and sound-reduction membranes (limited to thin-set installations only when using weak stone)

Consult MAPEI’s Technical Services Department for installation recommendations regarding substrates and conditions not listed.

**SURFACE PREPARATION**

• All substrates should be structurally sound, stable, dry, clean and free of any substance or condition that may reduce or prevent proper adhesion.

See MAPEI’s “Surface Preparation Requirements” document in the Related Documents section of the Tile & Stone Installation Systems page on MAPEI’s Website.

**MIXING**

Before product use, take appropriate safety precautions. See the Safety Data Sheet for details.

1. Into a clean mixing container, pour about 2 U.S. gals. (7.57 L) of Granirapid® liquid.
2. Gradually add 50 lbs. (22.7 kg) of Granirapid gray powder (or 46 lbs. [20.9 kg] of Granirapid white powder) while slowly mixing.
3. Use a low-speed mixing drill (at about 300 rpm), with an angled cross-blade mixer or double-box mixer. Mix thoroughly until the mixture becomes a smooth, homogenous, lump-free paste. Avoid prolonged mixing.
4. Do not mix more material than can be installed in 30 minutes. The setting time depends on temperature and humidity.
5. Do not slake. Spread immediately.

6. If the mixture becomes heavy or stiff, remix without adding more liquid or powder.

**PRODUCT APPLICATION**

1. Over porous surfaces or in hot climates, dampen the surface and keep the product cool to achieve maximum working time.
2. Choose a notched trowel (see the “Approximate Coverage” chart) with sufficient depth to achieve greater than 80% mortar contact to both the tile and substrate for all interior applications, and greater than 95% for exterior installations, commercial floor and wet applications. It may be necessary to back-butter tiles in order to meet these requirements. (Refer to ANSI A108.5 specifications and TCNA Handbook guidelines.)
3. With pressure, apply a coat by using the trowel’s flat side to key mortar into the substrate.
4. Apply additional mortar, combing it in a single direction parallel to the tile’s shortest dimension, with the trowel’s notched side.
5. Spread only as much mortar as can be tiled before the product skins over. Open time can vary with jobsite conditions.
6. Place the tiles firmly into the wet mortar. Push the tiles back and forth in a direction perpendicular to trowel lines, to collapse the mortar ridges and to help achieve maximum coverage. Ensure proper contact between the mortar, tile and substrate by periodically lifting a few tiles to check for acceptable coverage.
7. Remove excess mortar from the grout joints so that at least 2/3 of the tile depth is available for grouting (see ANSI A108.10 guidelines).

**EXPANSION AND CONTROL JOINTS**

Provide for expansion and control joints as specified per TCNA Method EJ171 or TTMAC Specification Guide 09 30 00, Detail 301MJ. Do not cover expansion joints with mortar.

**CLEANUP**

• Clean tools and tile while the mortar is fresh using only water.

**PROTECTION**

• Protect floors for 3 to 4 hours before grouting. Protect from heavy traffic for 24 hours.
• Protect from frost for 7 days.
• When installed in conjunction with Ultracolor Plus FA grout, Granirapid® will allow water submersion in 72 hours.
ISO 13007 Classifications

<table>
<thead>
<tr>
<th>Classification Code</th>
<th>Classification Requirement</th>

</tbody>
</table>

* Anything that meets A118.15 by definition meets or exceeds A118.4.

Shelf Life and Application Properties at 73°F (23°C) and 50% relative humidity

- Shelf life: 1 year (powder); 2 years (liquid)
- Open time**: 10 to 20 minutes
- Pot life**: 30 minutes
- Time before grouting**: 3 to 4 hours
- VOCs (Rule #1168 of California's SCAQMD): 34 g per L
- VOCs (Section 01350 of California's CDPH): Passed

** Open time, pot life and time before grouting vary based on jobsite conditions.

Approximate Coverage*** per 46 lbs. (20.9 kg) of gray powder or 50 lbs. (22.7 kg) of white powder, combined with 2 U.S. gals. (7.57 L) of liquid
