

To comply with the legal obligations for pre-registration according to Title III, Chapter 3 of REACH, Rescon Mapei AS confirms that it has already pre-registered all substances that Rescon Mapei AS currently manufactures in the EU/EEA.

Downstream users of our products will need information to ensure their own compliance under REACH. This includes confirming that their use is covered by the registration of their supplier. We recognize that downstream users have the right to inform their suppliers about their intended use so that their use can be included in the registration dossier, and an appropriate assessment can be performed.

However, Rescon Mapei AS is also a Downstream user, and hence cannot provide nor clarify Exposure Scenarios and uses until we receive this information from our suppliers.

This information will not be available until the Manufacturers/suppliers have registered their substances/products.

Rescon Mapei AS is not able to provide detailed information on the **Exposure Scenarios and uses** to be covered in registration dossiers. During the completion of the registration dossiers, Rescon Mapei AS will proactively contact companies in the supply chain to gather data on their intended uses and, if needed, the exposure data for the products involved.

Pre-registration numbers were assigned only as an administrative tool during the pre-registration process. These numbers have no value or meaning to customers or downstream users. They cannot be used to confirm that a product is in compliance with REACH. Rescon Mapei AS has decided not to disclose individual pre-registration numbers, following the advice of the European chemical industry association (CEFIC).

Please note that REACH does not refer to products but to substances. Therefore, requests for information may sometimes be difficult to answer since deadlines as well as requirements may differ, depending whether a product contains more than one substance and/or components which might fall under an exemption according to the regulation (i.e. polymers). Of course we will always try to inform our customers in a proper way.
